SUMMARY

A student from SMK Telkom Malang who is studying Web developer and website optimization. Currently I am studying Node.js, React.js, Laravel and Data analysis. I am an expert in Java, HTML, CSS, and using Figma. I am a person who always wants to be at the forefront, always curious about technology, always takes advantage of existing opportunities, and always tries to be the best.

WORK EXPERIENCE

Fullstack Web Developer Intern

Sep 2024 - Present

Burningroom Technology | Surabaya

- Develop and maintain Laravel and Livewire based website features, increasing business process efficiency by 30%.
- Coordinate with team and clients in handling technical issues, which increases user satisfaction or resolves client issues.
- Optimizes application performance, which contributes to increased page loading speed.
- Implement and improve authentication and authorization systems, improving application security by reducing the risk of unauthorized access and misuse.
- Helps implement CI/CD in application development, which reduces deployment time by 20% and increases team productivity.

PROJECTS

Field Rental Website

[View in GitHub](#)

The development of a field rental management system as a Full Stack Developer, utilizing Laravel and Livewire for seamless interactivity and Bootstrap CSS for a responsive UI.

- Designed and developed both frontend and backend components, ensuring a smooth and user-friendly experience for clients and administrators.
- Implemented a structured booking system that allows users to efficiently reserve fields, manage schedules, and track client information.
- Developed database management functionalities to store and retrieve rental data seamlessly, improving operational efficiency.
- Optimized system performance and user experience through thorough testing and debugging, reducing errors and enhancing reliability.
- Ensured mobile responsiveness and accessibility, leading to increased user engagement and a streamlined booking process.

Chatify - Realtime chat apps

[View in GitHub](#)

The end-to-end development of **ChatterFly**, a dynamic real-time chat platform, as a Full Stack Developer, leveraging **Laravel** for backend robustness and frontend interactivity.

- Engineered a seamless **real-time messaging system**, enabling instant communication between users.
- Implemented a **friendship system**, allowing users to connect and interact with new people effortlessly.
- Utilized **WebSockets** to ensure low-latency, real-time updates, enhancing user engagement.
- Designed a **responsive and intuitive UI** for a smooth user experience across devices.
- Built a **secure authentication system**, ensuring safe and private conversations.
- Conducted rigorous testing and optimization to improve performance, scalability, and reliability.

ChatterFly is designed to foster new connections and facilitate real-time communication, creating an engaging and interactive chat experience for users.

Wikusama Caffe – Smart Café Management System

[View in GitHub](#)

Developed **Wikusama Caffe**, an advanced café management system, as a **Full Stack Developer**, utilizing **Node.js (Express)** for backend efficiency and **React** for a dynamic, user-friendly frontend.

- Designed and implemented an **order management system**, streamlining food ordering for a seamless customer experience.
- Developed an **integrated payment system**, simplifying transactions and improving checkout efficiency.
- Built a **comprehensive financial tracking module**, enabling real-time monitoring of daily revenue, expenses, and payroll.
- Managed **inventory tracking**, ensuring efficient stock control and reducing waste.
- Created an **employee salary and management system**, optimizing payroll processing and staff organization.
- Ensured a **responsive and intuitive UI**, enhancing usability across all devices.

Wikusama Caffe is designed to **modernize café operations**, offering an all-in-one solution for **order processing, financial management, and operational efficiency**.

EDUCATION

Software Engineering
SMK Telkom Malang

July 2022 - Present

SKILLS

Hard Skills:

- Programming Languages: Java, Python, C#, JavaScript, PHP
- Web Development: HTML, CSS, React.js, Laravel
- Backend Development: Node.js, Express.js
- Database Management: MySQL, MongoDB, Pos
- Version Control: Git

Soft Skills: Eager to Learn, Analytical Thinking: Capable of analyzing complex problems and devising effective solutions, Attention to Detail, Collaboration, Effective Communication, Adaptability
